## Class Solitaire

`java.lang.Object`  
`edu.fau.COT4930.Solitaire`

### All Implemented Interfaces:

`MouseMotionListener`, `EventListener`

```
public class Solitaire
  extends Object
  implements MouseMotionListener
```

### Constructor Summary

SUMMARY: NESTED | FIELD | CONSTR | METHOD DETAIL: FIELD | CONSTR | METHOD

SEARCH: ***Method Detail*****main**

```
public static void main(String[] args)
```

**newGame**

```
public void newGame()
```

Function creates and initializes all the piles that are required for the solitaire game these piles are: Discard pile (pile that holds all cards shown from deck) 4 suit piles (holding spade, heart, club, diamond cards from A-K respectively) 7 table piles(these are the main piles a user will play on)

**returnCardsFromGraphics**

```
public void returnCardsFromGraphics()
```

When the game is drawn each table pile and deck is created this function returns the initialized table piles back to main game for user to interact with

**addToTable**

```
public TablePile addToTable(TablePile table, int i)
```

This function takes in a TablePile table and pile number i and returns an altered TablePile pile number i represents a table 1 - 7 that user clicked on if i = 0, then the player clicked on the discard pile and if found to be the index of the card in the pile that is being added to the table if

card or pile can be added to a different pile it is added and the altered pile is returned if it cannot be added then the original pile is returned

SUMMARY: NESTED | FIELD | CONSTR | METHOD    DETAIL: FIELD | CONSTR | METHOD

Parameters:

table -                      SEARCH:

i -

Returns:

### addToSuitPile

```
public SuitPile addToSuitPile(SuitPile suit, Card c, int i)
```

Add card *c* to top of suitPile *suit* and reset suitPile for drawing *i* indicates the suit pile card is being added to

Parameters:

suit -

c -

i -

Returns:

### traverseDeck

```
public void traverseDeck()
```

When deck is empty function traverseDeck is called this function returns all cards from the discard pile back to deck

### giveDiscard

```
public void giveDiscard()
```

fiveDiscard is used to send card from top of the discard pile to table piles if card can not be added to table pile it is returned back to discard pile

**mouseMoved**[PACKAGE](#) [CLASS](#) [USE](#) [TREE](#) [DEPRECATED](#) [INDEX](#) [HELP](#)
